

Pistol Grip External Antenna by TEK Industries, Inc.

Pistol Grip Antenna for the Freedom EA Data Sheet

TEK P/N 750172

The Pistol Grip Antenna (PGA) is an optional accessory for the Freedom EA, giving the user an extra 18 inches of “arm” to read hard to reach tags. The structure of the PGA are made primarily of aluminum alloys and polycarbonate. A soft vinyl grip is placed on the handle for a comfortable hold. The antenna is potted into the donut with clear epoxy. With the Freedom and PDA installed using the Industrial Case, the PGA is a well balanced unit. If the placement of the grip is not suitable, it can be changed to modify the balance or reach using only a 3mm hex wrench. Mounted on the tip of the lightweight aluminum extrusion with a friction hinge that swivels approximately 240 degrees, the donut stays where you put it.
